Lake Nutrients: Assessment and TMDLs

Robert Voss and Sebastien Clos-Versailles
Water Protection Program, Missouri Department of
Natural Resources

Missouri Lake Nutrient Criteria

Criteria Development

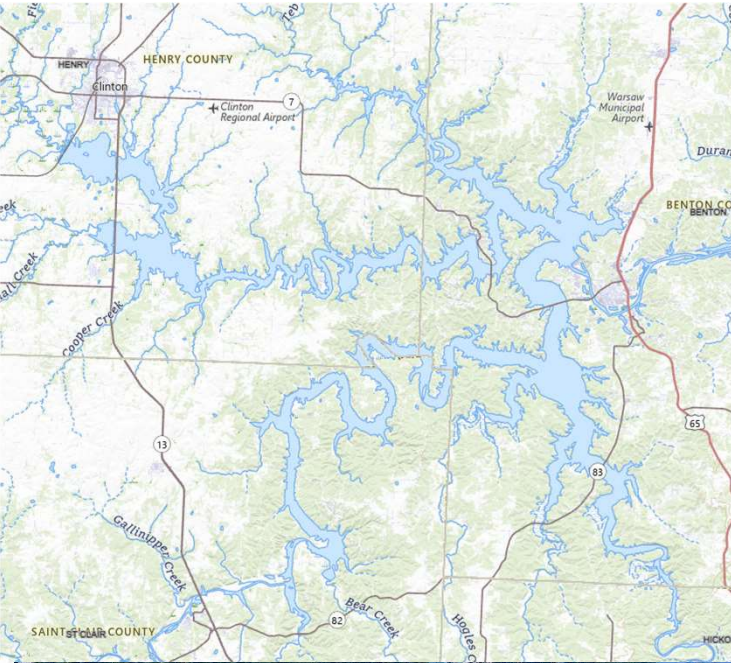

303(d) Assessments

Modeling & TMDL

Missouri Lakes

- Vast majority of lakes in MO are man made riverine impoundments.
- Many are multipurpose use reservoirs; flood control, hydropower, drinking water, boating, swimming, fishing, etc.
- No “reference” conditions

Missouri Lakes

- These differ from natural lakes in ways that affect nutrient dynamics and responses; such as residence time, sediment loads, water level fluctuations, and shoreline length
- MO Lakes have relatively high flushing rates

Figure 5-4. Estimated Relationship between In-Lake Total Phosphorus as a Proportion of Inflow TP to Flushing Rate from Welch and Jacoby 2004 as presented in Jones et al. 2008b.

Missouri Lakes

- Due to regional differences across the state, criteria were developed by Ecoregion.
- Lakes <10 acres and in the Big River floodplains were excluded.
- Aquatic Life designated use determined as the most sensitive use

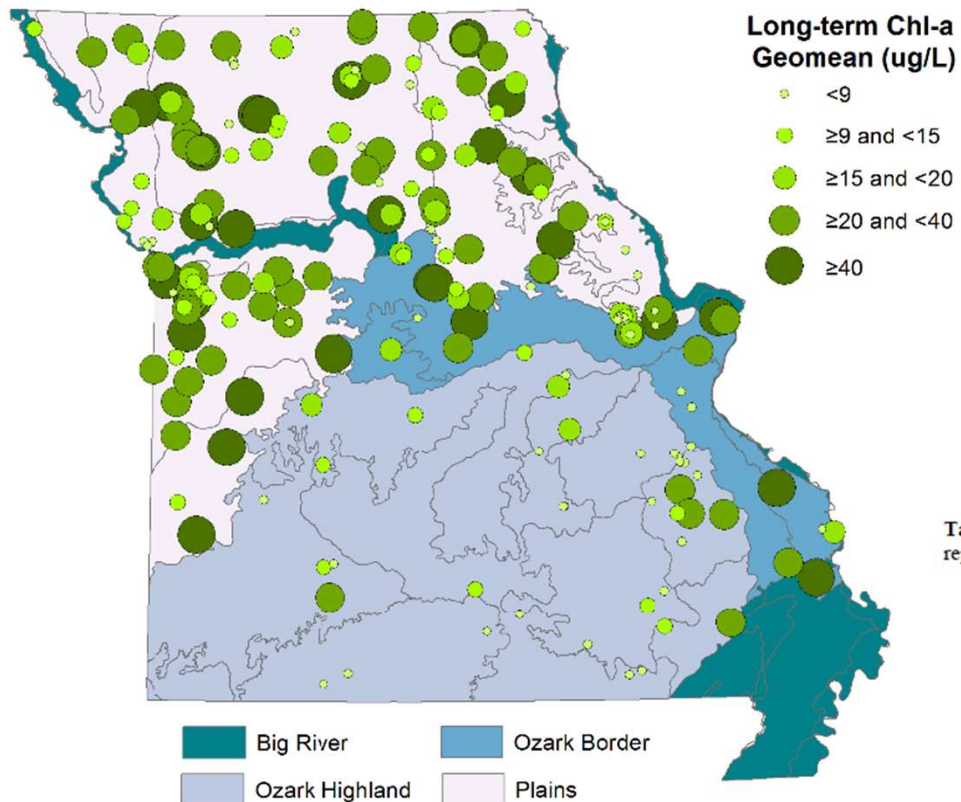

Table 5-1. Trophic State Thresholds for Missouri Reservoirs from Jones et al. 2008a. Values in parentheses represent the range of chlorophyll values reported for each trophic category worldwide (Nurnburg 1996).

| Trophic State | Upper Limit of Chlorophyll for Trophic State (ug/L) |
|----------------|---|
| Oligotrophic | 3 (2 – 4.3) |
| Mesotrophic | 9 (5 – 10) |
| Eutrophic | 40 (18 – 40) |
| Hypereutrophic | >40 |

Missouri's Lake Nutrient Criteria (Attempt #1)

Site Specific Criteria (~2009)

- First attempt was disapproved by EPA, with exceptions for Site Specific Lakes
- Generally, apply to the highest quality lakes in MO
- Specific numeric criteria for TN, TP, and Chl-a
- Applies to <30 lakes throughout the state
- Geometric mean of minimum 3 years of data; at least 4 samples per year collected from the surface near the outflow of the lake May through September

| Lake Ecoregion | Lake | County | Site-Specific Criteria (µg/L) | | |
|----------------|--|----------------|-------------------------------|-----|-------|
| | | | TP | TN | Chl-a |
| Plains | Bowling Green Lake | Pike | 21 | 502 | 6.5 |
| | Bowling Green Lake (old) | Pike | 31 | 506 | 5.0 |
| | Forest Lake | Adair | 21 | 412 | 4.3 |
| | Fox Valley Lake | Clark | 17 | 581 | 6.3 |
| | Hazel Creek Lake | Adair | 27 | 616 | 6.9 |
| | Lincoln Lake – Cuivre River State Park | Lincoln | 16 | 413 | 4.3 |
| | Marie, Lake | Mercer | 14 | 444 | 3.6 |
| | Nehai Tonkaia Lake | Chariton | 15 | 418 | 2.7 |
| | Viking, Lake | Daviess | 25 | 509 | 7.8 |
| | Waukomis Lake | Platte | 25 | 553 | 11.0 |
| | Weatherby Lake | Platte | 16 | 363 | 5.1 |
| Ozark Border | Goose Creek Lake | St Francois | 12 | 383 | 3.2 |
| | Wauwanoka, Lake | Jefferson | 12 | 384 | 6.1 |
| Ozark Highland | Clearwater Lake | Wayne-Reynolds | 13 | 220 | 2.6 |
| | Council Bluff Lake | Iron | 7 | 229 | 2.1 |
| | Crane Lake | Iron | 9 | 240 | 2.6 |
| | Fourche Lake | Ripley | 9 | 236 | 2.1 |
| | Loggers Lake | Shannon | 9 | 200 | 2.6 |
| | Lower Taum Sauk Lake | Reynolds | 9 | 203 | 2.6 |
| | Noblett Lake | Douglas | 9 | 211 | 2.0 |
| | St. Joe State Park Lakes | St Francois | 9 | 253 | 2.0 |
| | Sunnen Lake | Washington | 9 | 274 | 2.6 |
| | Table Rock Lake | Stone | 9 | 253 | 2.6 |
| | Terre du Lac Lakes | St Francois | 9 | 284 | 1.7 |
| | Timberline Lakes | St Francois | 8 | 276 | 1.5 |

Criteria Development (Round 2)

- Data from the MU Limnology Laboratory (Statewide Lake Assessment Program [SLAP] and Lakes of Missouri Volunteer Program [LMVP]) were compiled for analysis.
- SLAP employs students as field technicians to collect water samples and make field measurements while LMVP relies on citizen volunteers. Laboratory analyses for both programs are performed by the MU Limnology Laboratory. Most all the data were collected during the summer growing season (May through September). Data collected outside of the summer growing season were not included in the database.
- Both LMVP and SLAP collect water samples for chlorophyll-a, TN, TP, volatile and nonvolatile solids, and Secchi depth
- Reservoirs were attributed in the database for geographic coordinates, size, and ecoregion.
- The number of reservoirs sampled has varied over time, but LMVP samples approximately 66 reservoirs between four and eight times each year, whereas SLAP samples approximately 75 reservoirs four times each summer.
- Data were limited to sample sites located near the reservoir dam and excluded sites located in reservoir arms.
- The dataset included 32,000+ records from 200+ reservoirs spanning approximately 15 years (1999-2014).

Criteria Development (Round 2)

- Chl-a was selected as the response variable
- Chl-a responds reliably to TP; fish/AQ life linked to TP
- TP-Chl-a relationship used to determine Chl-a impairment threshold

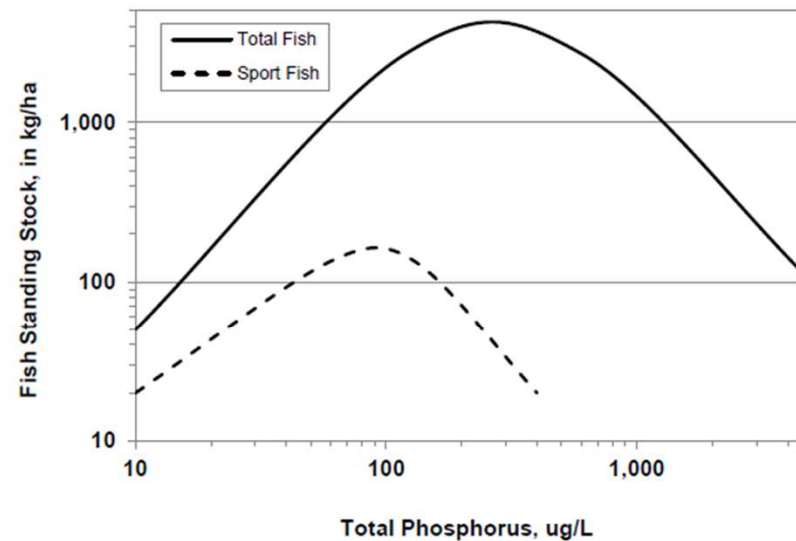

Figure 6-1. Generalized Relationship of Total and Sport Fish Standing Stock to Total Phosphorus Concentrations in Reservoirs Adapted from Ney 1996.

Criteria Development (Round 2)

- Nutrient screening thresholds to address the "gray zone"
- Chl-a NSTs were set equal to the 50th percentile of the distribution of growing season chlorophyll data for each ecoregion (Figure 5-2).
- TP and TN NSTs were back calculated using the respective chlorophyll NST and relationships presented in Figure 5-3.

Figure 5-2. Distribution of Growing Season Chlorophyll Geometric Means by Ecoregion for Missouri Reservoirs.

Missouri's Lake Nutrient Criteria (Round 2)

Ecoregional Criteria (~2018)

- Targets aquatic life designated use, focuses on the biological response to nutrients,
- Considers ecoregional differences and existing trophic levels, and
- Supplements response impairment thresholds with conservative nutrient screening thresholds and biological response assessment endpoints to better support determinations of impairment.
- Annual geometric mean consisting of at least 4 samples per year collected from the surface near the outflow of the lake May 1 through September 30.
- 1-in-3 year allowable exceedance frequency of the Response Impairment Threshold (Chl-a)
- Response Assessment Endpoint must occur in same year as Nutrient Screening Threshold exceedance

Table L: Lake Ecoregion Chl-a Response Impairment Threshold Values (µg/L)

| Lake Ecoregion | Chl-a Response Impairment Thresholds |
|----------------|--------------------------------------|
| Plains | 30 |
| Ozark Border | 22 |
| Ozark Highland | 15 |

Table M: Lake Ecoregion Nutrient Screening Threshold Values (µg/L)

| Lake Ecoregion | Nutrient Screening Thresholds | | |
|----------------|-------------------------------|-----|-------|
| | TP | TN | Chl-a |
| Plains | 49 | 843 | 18 |
| Ozark Border | 40 | 733 | 13 |
| Ozark Highland | 16 | 401 | 6 |

Missouri's Lake Nutrient Criteria (Round 2)

Response Assessment Endpoints

- Occurrence of eutrophication-related mortality or morbidity events for fish and other aquatic organisms;
- Epilimnetic excursions from dissolved oxygen or pH criteria;
- Observed shifts in aquatic diversity attributed to eutrophication;
- Cyanobacteria counts in excess of one hundred thousand (100,000) cells per milliliter (cells/mL);
- Excessive levels of mineral turbidity that consistently limit algal productivity

Annual Prospects Report

Binder Lake (150 acres) is situated on Dickerson Creek in the Ozark border region of Missouri on 710 acres of Jefferson City parkland. The park (managed by Jefferson City Parks and Recreation; 573-634-6482) contains numerous amenities including an RV campground, pavilions with picnic tables and barbecue grills, hiking trails, and public restrooms. The restrooms are open approximately April to November. The lake (managed by the Missouri Department of Conservation) has a concrete boat ramp, a disabled-accessible fishing dock and jetty, and two courtesy docks to assist boaters. **Largemouth bass** fishing should be much better in 2025. Electrofishing samples in 2024 sampled more bass over 15" than in previous years. Fish survey showed 30% of all bass sampled were over 15" and 8% were over 20". **Bluegill** fishing will be about the same in 2025 as in 2024. For bluegill that were sampled in 2024 43% were between 6-8". In the fall of 2024, the Missouri Department of Conservation stocked 4,000 additional **channel catfish**. The fish were 8-12" when stocked, so in 1-2 years these fish will make nice filets. Spring of 2024 electrofishing sampling showed **redear sunfish** are numerous in the 7-9". Crappie collected in the spring survey, showed both white and black crappie are found in Binder Lake. **White crappie** were the most numerous species collected with 20% over 10" and 13% over 12", one white crappie was over 15". **Black crappie** will have a good population of fish between 8 and 10". In 2025, there should be a good number of black and white crappie over 9" available to anglers.

Region: Central

Information: [573-815-7900](tel:573-815-7900)

BEST BETS

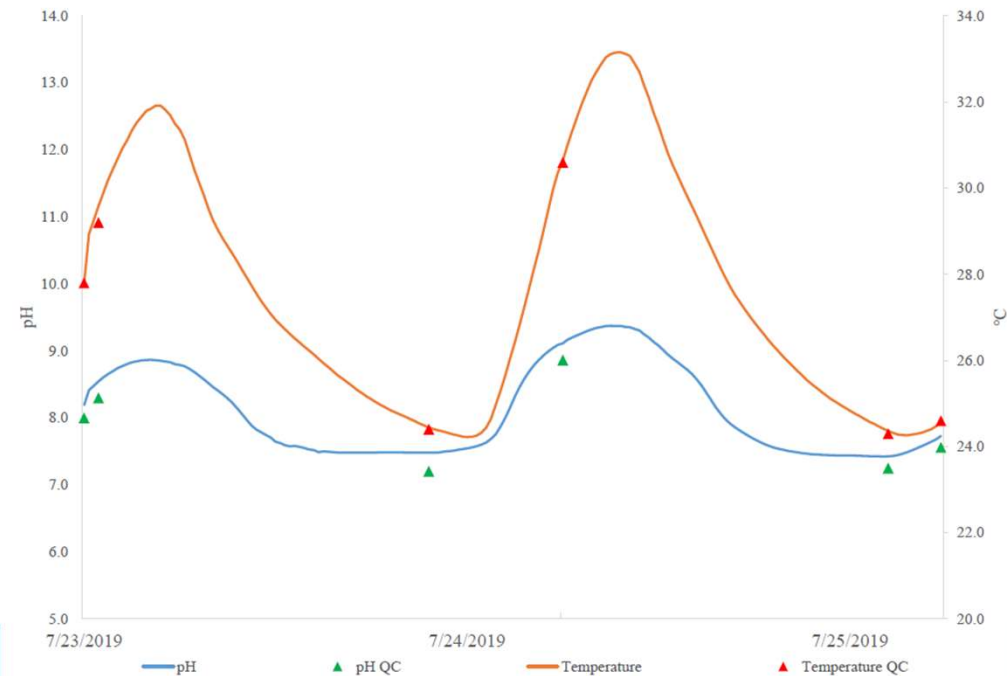

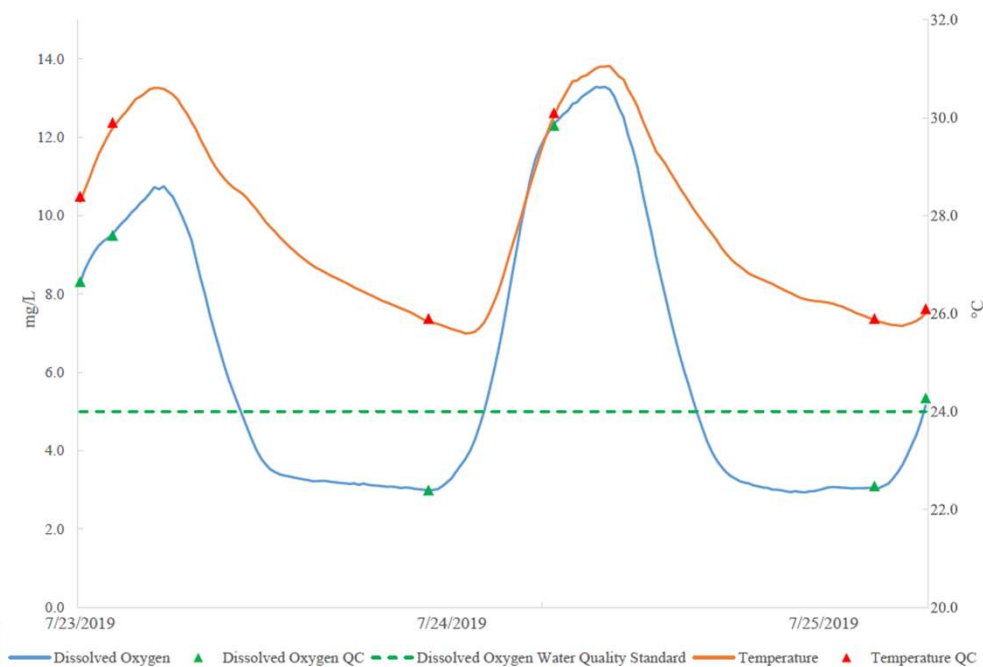

Largemouth Bass

Missouri's Lake Nutrient Criteria (Round 2)

Response Assessment Endpoints

- Occurrence of eutrophication-related mortality or morbidity events for fish and other aquatic organisms;
- Epilimnetic excursions from dissolved oxygen or pH criteria;
- Observed shifts in aquatic diversity attributed to eutrophication;
- Cyanobacteria counts in excess of one hundred thousand (100,000) cells per milliliter (cells/mL);
- Excessive levels of mineral turbidity that consistently limit algal productivity

Missouri's Lake Nutrient Criteria (Round 2)

Response Assessment Endpoints

- Occurrence of eutrophication-related mortality or morbidity events for fish and other aquatic organisms;
- Epilimnetic excursions from dissolved oxygen or pH criteria;
- Observed shifts in aquatic diversity attributed to eutrophication; and
- Cyanobacteria counts in excess of one hundred thousand (100,000) cells per milliliter (cells/mL);
 - Additionally algal toxin values exceeding the following thresholds:

| | |
|---------------------------|--|
| <u>Microcystin</u> | <u>8.0 $\mu\text{g/L}$</u> |
| <u>Cylindrospermopsin</u> | <u>15.0 $\mu\text{g/L}$</u> |
| <u>Anatoxin-a</u> | <u>15.0 $\mu\text{g/L}$</u> |
| <u>Saxitoxin</u> | <u>8.0 $\mu\text{g/L}$</u> |
- Excessive levels of mineral turbidity that consistently limit algal productivity

Missouri's Lake Nutrient Criteria (Round 2)

Response Assessment Endpoints

- Occurrence of eutrophication-related mortality or morbidity events for fish and other aquatic organisms;
- Epilimnetic excursions from dissolved oxygen or pH criteria;
- Observed shifts in aquatic diversity attributed to eutrophication; and
- Cyanobacteria counts in excess of one hundred thousand (100,000) cells per milliliter (cells/mL);
- Excessive levels of mineral turbidity that consistently limit algal productivity
 - ISS > 10 mg/L
 - Chl-a:TP ratio < 0.15
 - Secchi depth
 - Plains < 0.6 meters
 - Ozark Border < 0.7 meters
 - Ozark Highlands < 0.9 meters

Missouri TMDL Development

- First lakes listed on the 303(d) list under the new lake nutrient criteria was on the 2020 303(d) list.
- Lake nutrient TMDLs are listed as a priority on Missouri's Prioritization Framework
 - Data availability, designated uses, public health concerns (HABs), management priorities, and stakeholder engagement also play a role in the prioritization

Lake Nutrient TMDLs currently under development

- Pomme de Terre Lake - Impaired for chlorophyll-a
 - Currently just finished public comment period on May 12, 2025
- Lake St. Louis - Impaired for chlorophyll-a
 - Modeling complete, being prepared for public comment period
- Blind Pony Lake - Impaired for chlorophyll-a
 - Currently under development
- Harrison County Lake - Impaired for chlorophyll-a
 - Currently under development

Pomme de Terre Lake Listing

- Initially listed on Missouri's 2022 303(d) list for Chlorophyll-a
- Subject to the Ozark Highland Lake Ecoregion Criteria

| Chlorophyll-a Response Impairment Threshold (µg/L) | Nutrient Screening Thresholds (µg/L) | | |
|--|---|-----|---------------|
| | TP | TN | Chlorophyll-a |
| 15 | 16 | 401 | 6 |

- Impaired for exceedance of Nutrient Screening Threshold and Response Assessment Endpoint C
 - Cyanobacteria counts in excess of 100,000 cells per milliliter (cells/mL)

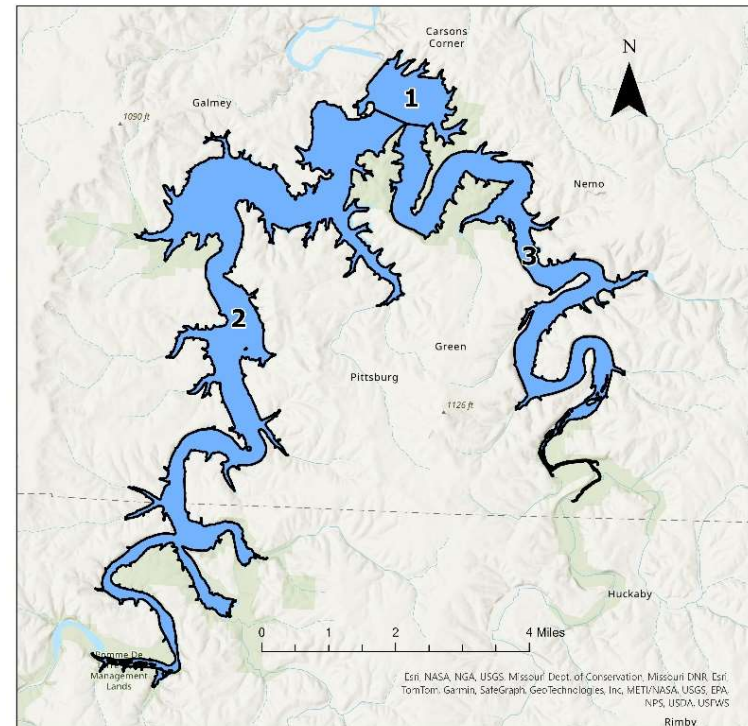

| May-September | Geometric Mean (µg/L) | | | Average | |
|---------------|--------------------------|-----|---------------|---------------------|-----------------------|
| | TP | TN | Chlorophyll-a | Secchi Depth (m) | Microcystin (mg/L) |
| 2017 | 29 | 547 | 13.2 | 1.35 | 0.07 |
| 2018 | 22 | 613 | 12.1 | 1.46 | 0.16 |
| 2019 | 45 | 567 | 13.5 | 1.38 | 0.18 |
| 2020 | 38 | 607 | 13.5 | 1.13 | 0.19 |
| 2021 | 49 | 652 | 12.9 | 1.25 | 87.8 |

Pomme de Terre Lake Modeling Approach - SWAT

- Combination of SWAT (watershed) and BATHTUB (lake) models
 - SWAT was run through the Hydrologic and Water Quality System (HAWQS) online platform
- Used TN, TP, and flow data from 2010 - 2020, which included a very low flow year in 2012
- SWAT flow calibration performed by comparing average monthly flow output to observed average monthly flow data at two gages on the Pomme de Terre River and Lindley Creek
- SWAT model calibrated to TN and TP data collected at the gage on Pomme de Terre River.
- Outputs from SWAT were then input to BATHTUB model

Pomme de Terre Lake Modeling Approach - BATHTUB

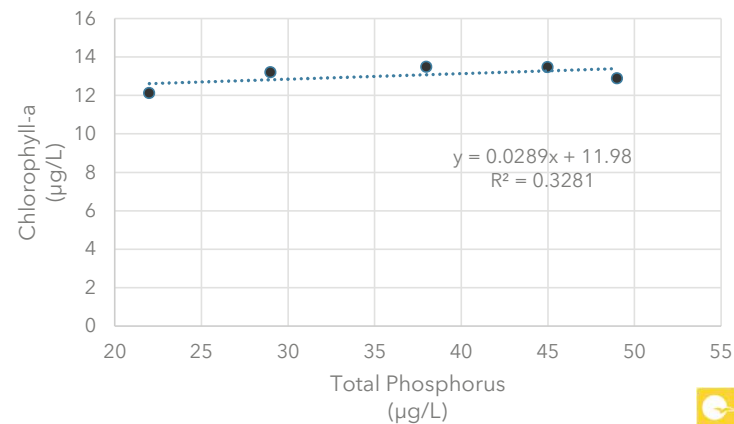

- Lake was segmented into three segments
 - Based on areas with differences in temperature, depth, turbidity, stratification and/or other watershed characteristics (urban vs. rural).
 - Near Dam, West Arm, East Arm
- Residence time in the lake model is determined by inflow and outflow rates
- All inputs are annual averages

Pomme de Terre TMDL

- Targeted the nutrient screening thresholds as that was a factor in it being listed
 - Each segment must show attainment with water quality standards
- Use of regression analysis to show the link between phosphorus and chlorophyll-a. Chlorophyll-a is used as a proxy here for harmful algae.

| | TMDL Water Quality Targets (µg/L) | | |
|--------------------------|--------------------------------------|-----|---------------|
| | TP | TN | Chlorophyll-a |
| Ozark Highlands Criteria | 16 | 401 | 6 |
| East Arm Targets | 10 | 333 | 5.8 |
| West Arm Targets | 15 | 400 | 4.7 |
| Near Dam Targets | 15 | 400 | 4.2 |

Pomme de Terre Today
